

RFID Document Tracking

Reduce time spent searching for lost or mis-filed documents.

SmartTherm™ RFID Tags

Originally designed for tracking documents, the SmartTherm™ RFID Tag is optimized for close proximity, allowing documents, file folders and boxes to be located quickly with a simple search by using an RFID-enabled handheld device.

By equipping documents with RFID tags, and the use of RFID hardware throughout the facility, the system offers Real-Time 100% annual inventory and audit reporting for clients, auditors, and authorities.

No longer constrained by time-consuming physical audits that involve locating and moving each carton, the RFID system provides assurance and validation that document archives are where they are supposed to be at all times.

RFID document-tracking systems save time and money by drastically reducing:

1. Time spent searching for lost or mis-filed documents
2. The financial and legal impact associated with losing documents

Benefits of Document Tracking

- Locate documents quickly
- Increase workforce productivity
- Reduce operational costs

Features

- Consistent UHF range performance
- Delivers superior performance on a variety of materials

Applications

- Document Tracking
- Files & Folder Tracking
